

**Francisco Valero López, with IDI 23776040-C, as manager of the company
INSTALACIONES TÉCNICAS DE ALMERÍA, S.L.**

Certifies that:

After one year period of evaluating the Vulcan equipment against scale and rust, we can ensure the quality and efficiency of it.

Over the past year, our company has placed this equipment on the hot water production facilities like:

- Hospital Poniente of El Ejido
- Hospital Toyo of Almeria
- Four Stars Hotel Barceló of Adra
- And over 40 solo and group housing developments in the area of Poniente, Almeria.

The results of the tests made by the clients, so far, have been very successful. Specially with the very high rate of lime and other heavy minerals that the drinking water in this area contains, with almost double hardness to other waters from coastal environments like ours. Maybe one of the most important advantages which our customers and ourselves have found has been the removal of limescale and iron deposits from pipes which have been in service for a long period of time. We are currently in contact with several agricultural cooperatives in order to implement the Vulcan equipment in major farms of Almeria.
